

# Realizing Value from Digital Project Delivery

Real-time collaboration across distributed teams is critical, but it shouldn't be the only focus for firms undergoing digital transformation. AEC firms need to implement digital design management in a way that enables workflow automation across the project lifecycle and delivers real, tangible Return on Investment (ROI) for the business.

An increasingly competitive market has ushered in new digital toolsets that enable collaborative workflows across distributed teams, but AEC firms continue to struggle to truly transform business processes.

**This poses the question: *What does digital transformation really mean for the AEC industry? And how does it deliver ROI?* Let's find out.**

## Unlocking the ROI of Digital Project Delivery

**Building Information Modeling (BIM)** is the foundation of digital transformation, helping AEC firms streamline digital project delivery across the entire project lifecycle to create efficiencies, lower costs, and improve productivity.

But digital transformation is about more than connecting teams. Autodesk BIM Collaborate Pro allows you to deliver real, tangible ROI for the business by further streamlining operations and enabling the free flow of project data between team members.

This holistic approach elevates firms' existing digital transformation capabilities so they can operate more efficiently, deliver positive client outcomes, and win more projects.

### Improve Collaboration

#### Leverage the right resources

Build a team based on expertise and capabilities.

#### Save time

Automate and unite cross-team design processes for smoother project handoff.

#### Improve project quality

Clearly communicate requirements, identify synchronization issues, and reduce frustration from siloed work environments.

### Increase Workload Capacity

#### Focus productivity

Make sure your designers are spending time designing, not managing teams, files, or data.

#### Eliminate idle time

Speed the review process to almost real time to keep projects moving forward.

#### Grow intelligently

Scale operations in line with business needs while limiting IT or process complexity.

### Improve Data Exchange

#### Enable data-driven decisions

Give designers the information they need when they need it.

#### Reduce time searching for files

Establish a single source of truth for managing data and files.

#### Synch in seconds, not hours

Synch files much faster by uploading changes, not the whole file.

### Better Service Customer Needs

#### Gain agility

Improve your ability to address ever-changing industry standards and growing project complexity.

#### Win more projects

Increase efficiency and productivity and lower your competitive bids without sacrificing profit margins.

#### Build industry leadership

Increase your digital maturity and serve as a model for the AEC industry.

Digital project delivery powered by Autodesk connects the value of your digital transformation strategy across the entire project lifecycle.
